Annual list of the fastest growing
technology companies in North America

Audit . Tax . Consulting . Financial Advisory .

2005 Deloitte Technology Fast 500

Research and Eligibility

The Deloitte Technology Fast 500 is a ranking of the fastest growing technology companies in North America based on percentage fiscal year revenue growth over five years (2000–2004).

The list is the result of research on technology companies. Sources for public and private companies that make the list include public company databases, Deloitte's 15 regional Technology Fast 50 programs in North America and direct nominations.

To be eligible for the Technology Fast 500, a company must meet the following criteria:

1. Be a technology company, defined as a company that owns proprietary technology that contributes to a significant portion of the company's operating revenues; or devotes a significant proportion of operating revenues to research and development of technology. Using other companies' technology in a unique way does not qualify.
2. Meet minimum operating revenue requirements:
 - 2000 operating revenues must be at least \$50,000 USD or \$75,000 CD.
 - 2004 operating revenues must be at least \$1 million USD or CD.
3. Be in business a minimum of five years.
4. Be headquartered in the United States or Canada.

Fast 500 Companies Average Percentage Growth Rate

The Joys of Sustained Growth

We've had some high flying years since the tech boom of the '90s. Now, in a sign of industry maturity, things are steadying a bit. As an industry, technology has found its place in the world. One sign is that some of the more exorbitant growth patterns are settling down from out of this world to "merely" fabulous. After all, who would ever complain about a five-year growth in revenues of almost 74,000 percent? That's this year's 11th annual Deloitte Technology Fast 500 winner, NuVasive, Inc. And, the rest of the Fast 500 companies? They're doing very well, thank you. They're an interesting, eclectic mix of creativity and savvy business models. Their success proves that with the right idea and sound operations, success doesn't burst in a bubble. It's all about consistency.

Our top five companies experienced an average revenue growth rate over five years of 45,531 percent. Not surprisingly, given the more steady advances this year, average revenue growth for our Fast 500 companies as a whole declined from last year to 2,408 percent.

The Top Five

NuVasive, Inc. is our leader this year. The San Diego, Calif.-based company develops minimally invasive back surgery products. Its earnings in 2004 were \$38,403,000, an increase of 73,752 percent from 2000 revenues of \$52,000.

NetSuite Inc., a San Mateo, Calif.-based developer of on-demand applications for small- and medium-sized businesses, came in second. The company posted revenues of \$41,256,000 in 2004, up 43,327 percent from 2000, when it had \$95,000 in revenues.

Fast 500 Companies by Industry Segment

As used in this document, the term "Deloitte" includes Deloitte & Touche LLP, Deloitte Consulting LLP, Deloitte Financial Advisory Services LLP and Deloitte Tax LLP.

Third place is held by Newport Beach, Calif.-based Acacia Research, which develops, acquires, and licenses patented technologies. Acacia Research reached revenues of \$23,925,000 in 2004, up 41,874 percent from its 2000 revenues of \$57,000.

CaseStack, Inc., which provides logistics outsourcing services to mid-sized consumer packaged goods companies, came in fourth. The Santa Monica, Calif.-based company reported revenues of \$25,461,000 in 2004, increasing 39,071 percent from 2000 revenues of \$65,000.

Rutter Inc., based in St. John's, Newfoundland in Canada, takes fifth place. Rutter, which develops voyage data recorders and related technologies, reported revenues of \$66,595,000 in 2004, a jump of 29,630 percent from \$224,000 in revenues earned in 2000.

Fast Highlights: How the West Has Won — Again

Once more, we see a disproportionate number of Fast 500 companies coming from the West. Indeed, the Western region can claim the greatest number of companies on the list with 139, or 28 percent. Western companies also can claim the highest percentage of growth (3,137 percent). However, this year only four of our top 10 are in the West. All of these, and all from California, are in our top five spots.

However, California is home to fewer Fast 500 companies this year — 105 compared to 130 last year. Regionally, the Northeast again follows the West with 25 percent, followed by the Southeast (increasing to 20 percent), Canada (10 percent), the Southwest (9 percent), and the Midwest (8 percent).

This year, four of the list's Top 10 are software companies, up from one last year, and software companies continue to dominate the Fast 500 list as a whole, numbering 186, or 37 percent. Biotechnology/pharmaceutical follows as the second largest industry sector, at 16 percent. Communications/networking companies represent 14 percent of the list. Internet companies account for 11 percent. Medical equipment companies follow at 8 percent, with scientific/technical instrumentation next at 6 percent. The list concludes with computers/peripherals and semiconductor at 4 percent each.

Even fewer companies on the list this year are public — 53 percent compared to last year's 59 percent. Surprisingly, compared with previous years, their average revenue growth is less than private companies on the list: 2,098 percent compared with 2,760 percent.

Eleven companies in this year's Fast 500 reported more than \$1 billion in revenues in 2004, up from seven the previous year. The top earner is Cingular Wireless, a joint venture between SBC Communications Inc. and BellSouth Corporation based in Atlanta, with 2004 revenues of \$19.4 billion. This is the first year it has appeared on the Fast 500 listing and holds the Fast 500 ranking of 282.

2005 Deloitte Technology Fast 500

1

NuVasive, Inc.

More than half a million patients each year undergo spine surgery, and with the web of nerves and muscles involved, it can be among the most complicated of procedures, requiring months of rehabilitation.

So, it's no surprise that a suite of products that can minimize the procedure's invasiveness, eliminate potential nerve damage, get patients up right after surgery, and reduce operating and hospitalization costs is going to be a success. And, for NuVasive, Inc., whose products do all this, success has been very sweet.

"NuVasive was founded in 1997 by an orthopedic surgeon in San Diego," explained Alexis Lukianov, the company's Chairman and CEO. "I came on board in 1999. In the beginning, there were about a dozen employees. Now, we have 135, along with an independent sales force of more than 200." And, its revenues have grown from \$52,000 in 2000 to \$38,403,000 in 2004, a jump of 73,752 percent.

The company offers a tripod of products called Maximum Access Surgery or MAS. This minimally disruptive surgical platform includes NeuroVision, a proprietary software-driven nerve avoidance system, with an instrument tip that can see

and traverse nerves; MaXcess, a split-blade design retraction system that prevents muscle injury; and specialized implants, like SpherRX and CoRoent that minimize soft tissue disruption during surgery while maximizing visualization.

"What's driving this is that patients want to get back to the activities of daily living faster," said Lukianov. "We've been able to change the old paradigm. Surgeons can come in at unique angles and cut down surgery time by as much as 50 percent, which reduces costs, and reduces patient rehabilitation time by a couple of months."

NuVasive is just introducing a series of percutaneous instruments and motion preservation products, as well as the next generation of its core MAS products, which, he said, incorporate significant advances in streamlining and technologies.

"It's exciting when you can see your products make such a big difference," he said, "when you're pioneering technology that makes such a huge difference in people's lives."

Alexis Lukianov, Chairman and CEO

Five-Year Revenue Growth: 73,752%

2

NetSuite Inc.

There's Oracle and SAP and the like for the big players. But if you're a small-to-medium-size company and need a single application to run your business, you need something scaled a little smaller. And that's where NetSuite steps in.

The talent base that created and invested in the firm is impressive. As is Oracle Founder and CEO Larry Ellison and former development guru Evan Goldberg, who in 1998 developed a single application that would have all the functionality a smaller business would need.

NetSuite has evolved into a developer of on-demand enterprise resource planning and customer relationship management application software for businesses with less than 500 people. In 2002, Goldberg, chairman and chief technology officer, recruited another former Oracle employee, Zach Nelson, to be president and CEO. The company has gone from a team of five to 500 with revenues in 2004 of \$41,256,000, an increase of 43,327 percent from \$95,000 in 2000.

"We tried to take the power the big guys have had with their applications but design them for smaller companies,"

said Nelson. "The challenge is that they must be easy to use and also have a lot of functionality. The big difference, though, is that we deliver it only as a service. We manage the application and migrate the data. So our customers have no IT to worry about. They just log onto the Internet and run the business."

NetSuite is now in international expansion mode. They successfully started with Europe two years ago, and now they're entering Asia with the launch of a Singapore office.

While the business is focused on applications for core processes, they're adding deep functionality for specific industries to be able to sell to more and bigger companies.

"This is a big responsibility," said Nelson. "Companies are trusting us to host their data and maintain the functionality to run their business today and tomorrow. Our number one focus is on making our customers incredibly happy."

Zach Nelson, President and CEO

Headquarters: San Mateo, CA

Five-Year Revenue Growth: 43,327%

3

Acacia Research Corporation

For technology companies, the world revolves around intellectual capital. Acacia Research Corporation, founded in 1993 and led by Chairman and CEO Paul Ryan, has plenty of it. In fact, that's its primary raison d'être. The company is made up of two operating groups, Acacia Technologies, which develops, acquires, licenses, and enforces patented technologies, and CombiMatrix, which is developing a platform technology to rapidly produce customizable micro-arrays to identify and determine the roles of genes, gene mutations, and proteins.

Acacia Technologies, which controls 33 patent portfolios, including more than 120 U.S. patents, functions as a licensing outsourcing company. They partner with individual inventors and companies with \$500 million or less in revenues to license their technologies to companies such as Sony, Priceline.com, 7-Eleven, and Nokia. The industries they cover range from broadcast data retrieval and data encryption to network data storage and spreadsheet automation.

"Currently, we have in place 18 licensing programs, 10 of which have begun to generate revenues. The largest of these is digital media transmission," says Ryan, who joined the

company in 1996, when it went public. "Our other big programs are multi-dimensional barcodes and flat panel TV video enhancement."

Along with its micro-array program, CombiMatrix uses its in-house technology for medical diagnostics, drug development, and biodefense in addition to partnerships for nanomaterials development. Recently, the CombiMatrix group and its partner, Nanomaterials Discovery Corporation (NDC), achieved a milestone with the delivery of a prototype workstation for the discovery and development of new nanomaterials.

The parent company's revenues have grown 41,874 percent since 2000, from \$57,000 to \$23,925,000.

"The opportunities are endless," says Ryan. "For smaller companies, we're a great alternative to building an in-house licensing company. We're seeing a lot of demand for our services from them. And, it's great for us because we don't have to take the risk in developing the technology."

Paul Ryan, Chairman and CEO

Headquarters: Newport Beach, Calif.

www.acaciaresearch.com

Five-Year Revenue Growth: 41,874%

On the Horizon: Rising Stars

The Deloitte Technology Fast 500 also recognizes North America's 25 fastest growing young technology companies. These companies on the rise have met the same criteria as the Fast 500 but have been in business three or four years. Revenue growth is based over three years (2002–2004).

4

CaseStack, Inc.

If you shop at Wal-Mart, Target, Costco, or Rite-Aid, the items that fill your basket may well have come to you via CaseStack. However, that delivery didn't require any heavy lifting by them — at least not physically.

CaseStack, founded by President and CEO Dan Sanker in 1999, provides logistics outsourcing services to mid-sized (under \$1 billion in revenues) consumer packaged goods companies. If they need to ship shampoo, hot sauce, paper clips, or hot dog buns to retailers, CaseStack can make it happen.

A former Procter & Gamble executive, Sanker got the idea for the company after years of having seen issues come up with supply chain management and logistics. "Companies that used to compete on brand now compete on supply chain," he said. "Whoever can deliver the product inexpensively and with a high quality of service becomes the preferred vendor." When he saw that supply chain packages just weren't working for mid-sized firms, he saw an opportunity to create a virtual operation using one platform on a server that manages the movement of goods from end to end. Instead of buying a fleet of trucks and managing a chain of warehouses, CaseStack partners with the trucking and warehouse companies, using sophisticated software to orchestrate and monitor the transactions.

CaseStack now works with companies doing around half a million dollars in sales — about 600 of them — and partners with the likes of Wal-Mart. Earnings, which the first year were \$65,000, grew 39,071 percent to \$25,461,000 in 2004. The company, with 100 employees, expects to grow substantially in the next couple of years.

Of course, while the company's underlying premise is based on technology, Sanker is the first to acknowledge the art to the logistics business. "The great thing about how our model works is that the companies we work with have people who can make the decisions to fix the issue. It's not a theoretical world. Even with great technology it comes down to people fixing things and caring about making it right."

Dan Sanker, President and CEO

Headquarters: Santa Monica, CA

Five-Year Revenue Growth: 39,071%

5

Rutter Inc.

'Seize the opportunity' is a common mantra of entrepreneurs, and Donald Clarke is no exception.

In the late '90s, Rutter Technologies, which integrated shipboard sensor technologies into voyage data recorders (think black boxes on aircraft), was developing under the auspices of a local St. John's business incubator. Clarke and his investment partners, ConPro, had been paying attention to Rutter's activities and realized that there was a huge opportunity there when the International Maritime Organization (IMO) mandated the use of voyage data recorders by ships. The partners bought a controlling interest in Rutter in 2001 and took the company public in December 2002.

"Knowing the IMO and how regulations lead to opportunities for explosive growth, we saw it and decided to take advantage of it. Our goal was to reach \$500 million in sales in five years after going public through internal growth, new products, and strategic acquisitions," said Clarke.

He acknowledged that that goal is lagging a bit, but Rutter Inc.'s growth has still been remarkable. The company has gone from four employees to over 400, and revenues have increased from \$224,000 CD in 2000 to \$66,595,000 CD in 2004, a 29,630 percent increase.

Rutter Inc. has also expanded its products and services to include marine-certified electronic interfaces, which allow different parts of a ship, such as doors or the engine, to "talk" to a computer and radar imaging technology. "Our technology vastly improves radar images," Clarke explained. "You can pick up small images or a fast moving target. This application helps ships navigate through ice-infested waters."

In addition, he added, Rutter Inc. handles controls and automation for off-shore oil and gas platforms, again, enabling various parts of the platform to interface.

In the future, Clarke wants to bundle the radar imaging technology they've developed into other types of related products. "We're looking at military applications for radar imaging as well as more specific applications that could be utilized in various areas, such as bird tracking in and around airports, or in homeland security to aid in coastal and border surveillance," said Clarke. "We believe it will be a big part of our business in achieving our growth goal."

About Deloitte

Deloitte refers to one or more of Deloitte Touche Tohmatsu, a Swiss Verein, its member firms and their respective subsidiaries and affiliates. Deloitte Touche Tohmatsu is an organization of member firms around the world devoted to excellence in providing professional services and advice, focused on client service through a global strategy executed locally in nearly 150 countries. With access to the deep intellectual capital of 120,000 people worldwide, Deloitte delivers services in four professional areas, audit, tax, consulting and financial advisory services, and serves more than one-half of the world's largest companies, as well as large national enterprises, public institutions, locally important clients, and successful, fast-growing global growth companies. Services are not provided by the Deloitte Touche Tohmatsu Verein and, for regulatory and other reasons, certain member firms do not provide services in all four professional areas.

As a Swiss Verein (association), neither Deloitte Touche Tohmatsu nor any of its member firms has any liability for each other's acts or omissions. Each of the member firms is a separate and independent legal entity operating under the names "Deloitte", "Deloitte & Touche", "Deloitte Touche Tohmatsu" or other related names.

In the US, Deloitte & Touche USA LLP is the US member firm of Deloitte Touche Tohmatsu and services are provided by the subsidiaries of Deloitte & Touche USA LLP (Deloitte & Touche LLP, Deloitte Consulting LLP, Deloitte Financial Advisory Services LLP, Deloitte Tax LLP and their subsidiaries), and not by Deloitte & Touche USA LLP. The subsidiaries of the US member firm are among the nation's leading professional services firms, providing audit, tax, consulting and financial advisory services through nearly 30,000 people in more than 80 cities. Known as employers of choice for innovative human resources programs, they are dedicated to helping their clients and their people excel. For more information, please visit the US member firm's web site at www.deloitte.com/us.
