INTRINSYC ANNOUNCES SUCCESSFUL LAUNCH OF NEW MARKETING PROGRAM

February 10, 1999 - Intrinsic Software, Inc. -VSE:ICS (the “Company”) is pleased to announce today the successful launch of its DECF[®] (Distributed Embedded Computing Framework) Partnership Program, which has become the primary marketing initiative for the Company’s products and services. The Intrinsic DECF Partnership Program was created to address the needs of Original Equipment Manufacturers (OEMs) who are developing innovative new products based on Intrinsic’s leading edge technologies for the rapidly growing Internet-enabled Information Appliance market segment. Program details are available at <http://www.intrinsic.com/embeddedolutions/decf.html>

The Intrinsic DECF Partnership Program has been designed to provide OEMs and System Integrators with the DECF software technologies, developer tools and the technical assistance they require to successfully and quickly deploy their next generation embedded systems with superior Internet-enabled capabilities. From a revenue perspective, this program has a minimum project commitment of US\$100,000. The Company’s current experience indicates that DECF related contract awards will provide a 12 to 18 month revenue stream from US\$250,000 to greater than US\$2,000,000 per OEM project. Intrinsic is in detailed contract negotiations with a number of its DECF partners and expects to announce a significant contract award in March 1999.

The competitiveness of the embedded computing industry and the immense advantages available to OEMs who are first-to-market require Intrinsic to sign non disclosure agreements that do not allow specific disclosure of individual contract awards. However, Intrinsic shareholders may monitor corporate growth and progress via the DECF Partner website (<http://www.intrinsic.com/partners/decf/>) which goes on line on February 12, 1999, listing some of the current DECF Partners. DECF Partner listings will be added as new OEMs and Systems Integrators join this program.

As one of the acknowledged technology leaders in the Embedded Systems marketplace, Intrinsyc's customers have told the Company that improving Time-to-Market is a key requirement for their next generation of Internet-enabled Information Appliance development programs which are based upon the Windows CE® operating system (<http://www.microsoft.com/windowsce>) . A leading market research group, VDC predicts that the number of embedded devices shipping with Windows CE® will grow from 778,000 units in 1999 to 14.1 Million units in 2003 (<http://www.vdc-corp.com>).

“Our customers and prospects are coming to Intrinsyc because we have gained industry leading “best-in-class” status for Windows CE® development projects. Our ability to deliver elegant software solutions using our unique DECF software technologies, developer tools and consulting services provides OEMs with Time-to-Market advantages that can add \$ Millions to their product sales” says Don Sutcliffe, Executive Vice President, Sales and Marketing.

Intrinsyc Software, Inc. (VSE:ICS) develops software technologies for license and offers supporting services to OEMs and Systems Integrators building the next generation of Internet enabled consumer and commercial computing products.
