Wistron Licenses Soleus by Intrinsyc

Leading ODM selects Soleus to develop cost-effective, customer-specific mobile phones

Vancouver, BC and Taipei, Taiwan, June 12, 2006, Intrinsyc Software International, Inc. (TSX:ICS), a mobility software and services company, and Wistron Corporation (TSE:3231.tw), one of the world's leading original device manufacturers (ODM) producing information and communications technology (ICT) products, today announce that Wistron has licensed Soleus™ as a software platform for the development of mid-tier mobile phones. Soleus is a turnkey software solution based on Microsoft® Windows™ CE that offers a new way to develop mobile phones. Wistron, the first Soleus licensee, selected Soleus for its modular design and use of the Microsoft® Visual Studio™ tool chain that provides a new and more economic model for quickly developing and deploying multiple phone handsets, with varying features and user interface designs, from a common platform. This approach enables Wistron to reduce development costs, build mobile handsets faster and incur less risk. The Soleus licensing agreement follows the February 13, 2006 announcement that Wistron and Intrinsyc were collaborating to integrate Soleus into custom handset solutions.

Wistron plans to develop a number of market-driven, feature-rich phones based on Soleus for mobile phone manufacturers and network operators under an ODM business model. As a leading ODM producer of ICT products, Wistron supplies its technology to top-tier, global mobile phone brands. When Soleus-based phones developed by Wistron are sold into the market, Intrinsyc will earn licensing revenue on a fee per handset basis. The integrated Soleus UI Framework enables Wistron to completely customize a phone's user interface providing the differentiation network operators and name-brand manufacturers demand. Further customisation is possible at the application level through the rich suite of available third party applications.

"Soleus can be used as a standard platform for developing a number of mid-tier mobile phones," said Eric Y H Huang, General Manager, Handheld Product Business Unit, Wistron. "The design flexibility and low cost benefits that Soleus offers allow us to rapidly develop the tailor-made mobile phones that our customers require. Wistron looks forward to working with Intrinsyc to deliver innovative and differentiated Soleus-based phones to our customers in several global markets."

"This first licensing deal for the Windows-CE based Soleus helps prove that handset manufacturers see the benefits of this development platform," said Neil Strother, research director for mobile devices for The NPD Group, an independent trade industry analyst.

"Manufacturers such as Wistron want a high-level OS that can be used across multiple handsets. With Soleus, manufacturers now have a viable platform alternative to Symbian OS and Linux."

About Intrinsic Software International, Inc.

Intrinsic is a mobility software and services company. Its mobile software products, engineering design services and systems integration expertise help customers make better decisions, improve productivity, and reduce time-to-market. Since 1996, Intrinsic has built a strong customer base and has formed solid alliances with many leading technology companies including Microsoft, IBM, Intel, Philips, Siemens, Symbian, General Electric, Hand Held Products, Texas Instruments and Ford.

Named a Microsoft Gold Partner, Intrinsic has extensive experience with the intricacies of designing, developing and supporting voice and data-enabled handsets built on Microsoft's Windows™ CE operating system. Intrinsic is also the creator and licensor of Soleus™, the world's first feature phone software platform based on Windows™ CE. Soleus™ offers a new way to build feature phones, providing pre-integration with leading hardware platforms, all the telephony essentials and pre-integration of the most popular data applications.

Intrinsic is a publicly traded company, headquartered in Vancouver, Canada with additional regional offices in Bellevue, Washington, and Birmingham, UK and Barbados. To find out more about Intrinsic, visit: www.Intrinsic.com.

Forward Looking Statements

This press release may contain forward-looking statements that involve risks and uncertainties. These forward-looking statements relate to, among other things, plans and timing for the introduction or enhancement of our services and products, statements about future market conditions, supply and demand conditions, and other expectations, intentions and plans contained in this press release that are not historical fact. Our expectations regarding future revenues depend upon our ability to develop and supply products, which we do not produce today and that meet defined specifications. When used in this press release, the words "plan," "expect," "believe," and similar expressions generally identify forward-looking statements. These statements reflect our current expectations. They are subject to a number of risks and uncertainties, including, but not limited to, changes in technology and changes in the pervasive computing market. In light of the many risks and uncertainties surrounding the pervasive computing market, you should understand that we couldn't assure you that the forward-looking statements contained in this press release will be realized. The Company disclaims any intent or obligation to update or revise publicly any forward-looking statements, whether as a result of new information, future events or results or otherwise.
