5 CHINESE CT2 PUBLIC SERVICE OPERATORS TAKE DELIVERY OF PCS WIRELESS' PRODUCTS

Vancouver, B.C. - September 21, 1994. PCS Wireless, Inc. has received orders for and has delivered its proprietary distributed antenna MEX (Microcell Extender) and BEX (Base Station Extender) technology to 5 CT2 wireless telephone public service operators in China.

These 5 trial systems are being used to deploy PCS' Distributed Antenna Array (DAA) products in public wireless telephone access networks in cities throughout China. PCS Wireless, Inc.'s products increase the capacity and range of CT2 service at low cost, as well as providing roaming capability - a key feature absent from current Chinese CT2 networks.

"The telecommunications market in China has started to experience explosive growth. The delivery of these trial systems to China indicates that our wireless technology will play an important role in the deployment of these networks" said Guylain Roy, Director of Sales.

With installations in 12 countries and patents pending in 25, PCS Wireless Inc. is recognized worldwide as a leader in deploying Distributed Antenna Array (DAA) telecommunications systems.

On Behalf of the Board
